Improving Operations at General Motors - FLINT ENGINE

Recent news – February 28, 2019:

General Motors utilizes Dearborn Contracting Company for Productivity Improvements

Dearborn Contracting Company recently completed two projects for General Motors at GM-Flint Engine. The projects, GM – Flint Engine Productivity Improvements and GM – Flint Engine

SGE Crank Pumpback Conversion, were completed at the end of last year. The value of the improvements were in excess of \$300,000.

The General Motors – Flint Engine facility exceeds 1,100,000 square feet in size and employs over 800 employees. Flint Engine produces 1.4 liter engines used in the Chevrolet Cruze and Volt.

Gary Manning served as the Project Manager on the project developing budgets and work schedules. Ryan Langnes led field operations, coordinating operations at the plant and directing tradesmen. The work involved multiple off-hours shifts to complete the work before the plant resumed manufacturing operations.
